

Core Banking and Applications Division

Core Banking Management Department

Position: Senior Dot NET Developer

Responsibilities:

- Develop, maintain, and optimize applications using .NET Core / ASP.NET Core
- Design and implement microservices architectures and RESTful APIs
- Ensure API security using OAuth 2.0, JWT, API Keys, and other standards
- Guarantee applications meet standards for security, scalability, and high availability
- Create technical documentation, architecture diagrams, and system specifications
- Manage tasks efficiently to meet deadlines and achieve project goals
- Troubleshoot, debug, and resolve technical issues promptly
- Collaborate effectively with team members and communicate clearly

Requirements:

- Minimum 3 years of experience in software development using .NET Core / ASP.NET Core
- Strong understanding of microservices architecture, design patterns, and REST API design
- Experience with version control systems such as Git, GitHub, GitLab, and CI/CD pipelines
- Strong problem-solving, debugging, and analytical skills
- Knowledge of API security standards (OAuth 2.0, JWT, API Keys)
- Preferred: Experience with Docker and Kubernetes
